Chimney Swallows.

Wednesday July 35th, 1866.

This evening I saw hundreds of chimney swallows pass into the north west flue of an old-fashioned chimney in a rather small country house in the town of Plymouth. I was attracted by hearing their loud rattling notes and by looking in the direction from which the sound proceeded I saw a vast crowd of chimney swallows in the centre of which numbers at a time were pitching themselves in their peculiar manner into the chimney. This was at about half-past five o'clock, and I made all haste to reach the part outside by the coast near Plymouth, as of a mild from one that breeze I could
get then the greater part of them had gone down. They continued to go down, at intervals until 11 1/2 minutes past 8 when none went down until 16 minutes past 8 when a single bird passed on and this was the last one that I saw. The last ones that went in would pass a number over the top of the chimney each time, nearly dropping in but hesitating as though they thought the chimney was too full to hold another one. Nearly all the time there were already in the chimney kept up a continual chattering which although I was 50 yards from the house I could distinctly hear. This they kept up until 21 minutes past 8 and I do not know for certain. I knew much later for as I could no longer see the birds I put my watch to the best of my watch I left. Many of them at 7.35. The large flock would sometimes must have come from a great distance. Keep wailing round in a compos.
Small circle after scatters only to come together again.
